MARKETABLE PHOSPHATE ROCK IN JANUARY 1998

U.S. marketable phosphate rock production in January 1998 increased about 5% compared to the prior month, according to the U.S. Geological Survey (USGS). Annualized production for the month was 39.5 million metric tons, which was 12% lower than the total production in 1997 of 45.1 million tons.

Domestic phosphate rock sold or used, excluding exports for January, decreased slightly from the prior month, to about 3.4 million tons. Annualized sales or use for the month was 40.5 million tons, which was 3% lower than the total for 1997.

U.S. producer ending stocks for January were 7% lower than the figure shown in December. In the Florida-North Carolina region,

stocks were slightly lower, while in the Idaho-Utah region, stocks were 24% lower than the previous month.

Some phosphate rock import data for Morocco are suppressed by the Bureau of the Census; total U.S. import tonnage was estimated by USGS to average 150,000 tons per month, or 1.8 million tons per year. January import data were not available at the time of publication.

Estimated domestic apparent consumption for January, calculated from the sum of home deliveries and adjusted import data, translated to an annual rate of 42.3 million tons compared with 43.4 million tons in 1997.
